Why smile?

Salto smile presents a simple solution to your access requirements. No software or computer is required and you can program the locks yourself. There's also no need for expensive and disruptive installation of cables, Salto smile is a wire free system which can be easily DIY installed.

- Compatible with most existing doors and locks
- Simple standalone installation
- High security, weatherproof iButton fobs
- Quality AAA batteries (e.g. Duracell) last up-to 5 years
- Can control up to 1000 users
- Available in polished brass and stainless steel
- Various handle shapes available (dependent upon finish)
- Lost or stolen fobs are easily removed from the system

No PC

and operation

Dump that bunch
of keys

Programming:

Every user is allocated an iButton fob. Each user's fob is simply programmed into the system using the programmer fob and placed into the handle's reader. Each user fob has a shadow tag (as shown below) which is kept in a safe place. The shadow tag allows any lost or stolen fobs to be removed from the system preventing unauthorised access.

Shadow tag and iButton fob

Would you like a demonstration?

We can demonstrate the smile system at a time and place which is most convenient for you. We understand that access control systems can look daunting from the outside, let us show you just how simple they can be.
